

Price trend (Close and Open by Date/Year): Essentially flat and near-zero from 1980 through the late 1990s, then a slow rise begins around 2000–2005, followed by a sharp acceleration from 2010 onward, peaking above 300 (Close) near 2020 with growing volatility in the final years.

- 1) Volume by Year: Very low through the 1980s–1990s, rises steadily starting around 2000, peaks heavily around 2005–2012, then gradually declines toward 2020 — similar shrinking-volume pattern as Google, even as price kept climbing.
- 2) Scatter (Open vs Close): Points sit tightly on a diagonal line — daily open and close are nearly identical, as expected.
- 3) Two issues to flag:
- 4) "Sum of Open by Year" is scaled in tens of thousands (60K) that's because it's *summing* daily open prices across a year rather than averaging them, which isn't a meaningful number. Switch that field to Average of Open.
- 5) "Sum of Volume by Year, Quarter, Month and Day" is only showing Dec 1980–Jan 1981 — it looks like an accidental drill-down into a single period rather than the full year range. Worth removing or resetting.
